Supervisor: Dr. Rami Rashkovits

About SWIGGI:

SWIGGI named after Shimon Wiesenthal, offers users the possibility to find houses on Google maps that symbolize places where people lived in the past.

Each house displays data such as address, demographic information, and sometimes a link to the tenants' family tree, with Swiggy mainly referring to the Holocaust period and is intended to perpetuate the memory of the murdered.

Goal:

To develop an application for the SWIGGI website that allows locating people and their houses where they lived in the 19th and 20th centuries, in order to make their website suite accessible to the user in a friendly way.
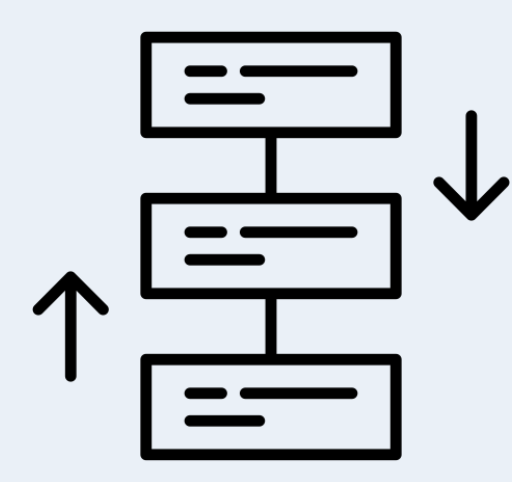

## *Dataset:*

Unarranged data as excel tables → Python Code → Structured data

The App:

SWIGGI Home Page
May the memory of Simon Wiesenthal be a blessing to all those who believe in Justice, in Tolerance and in Humanity.
